I have used high-end video editing software for years and have read most of the reviews out there, and only rarely has a type of software surprised me in the past. However, the one exception is Adobe Photoshop CC 2014. The text and photo editing tools in particular are perfect, and not just for the usual images I shoot - whether landscapes or portraits - but all the new and old cameras I have. The slider commands are smart and fluid and the ceiling for what can be done with the tool is just sky-high. After realizing that the software was in fact unusable to some users based on their platform and computer, Adobe promised to fix this defect in a future update. It takes two to tango, so I'll give them credit for at least trying.
